

## SNO-KONE MACHINE RENTAL GUIDELINES

1. If operating Sno-Kone machine outside locate a sturdy table on a level area keeping in mind that ice will slowly melt and drain out through the drain tube onto the ground. If operating machine inside, use a small bucket or pan to catch the water from the melting ice. Be sure to be within range of power.
2. Set the drain tray on a sturdy table with drain tube hanging over edge of table.
3. Set the Sno-Kone machine in the drain tray furthest from the edge of table.
4. Cones will be dispensed at the end where the metal tabs are located inside the dispenser so load the cones point first into the dispenser from other end. Make sure that cones are properly stacked in dispenser.
5. Slide the cone dispenser down into the bracket located on the side of the Sno-Kone machine. The bracket is on the same side where the power cord is attached.
6. Remove any bottles of syrup, pumps or pour spouts from the machine.
7. If using a pour spout, remove the cap and replace with the pour spout – fitting the spout snugly into the bottle. To dispense, simply turn the bottle upside down onto the ice. Repeat as necessary (usually once or twice). Do not squeeze the bottle. **Please return all bottles, caps and pour spouts (do not discard).**
8. If using a pump, remove the cap and seal from the gallon bottle and replace with the pump assembly. Prime the pump by squirting some syrup into a cup and discard. *If all of the syrup is not used it can be stored for another occasion if the cap is not discarded.*
9. Open the lid on top of the machine and using the larger scoop put regular ice cubes into the ice hopper. Fill to just below the edge of hopper. Close the lid and while holding the lid handle, press and hold the red button located on the back of the machine. This will start grinder. Using the lid handle, apply pressure during the grinding process. A lighter pressure will produce a finer snow. **Do not put hand into ice hopper.**
10. To serve pull a cone from the bottom of the dispenser, scoop snow from inside the machine (using the smaller scoop), put the snow into the cone and add syrup. For best results and to avoid breaking the scoop handle, hold the smaller scoop handle closer to scoop bowl not at the end of the handle.

When finished using the Sno-Kone machine:

Please remove all snow/ice from machine

Drain/remove all water from machine and drain pan

Discard any unused syrups in 1 liter bottles

Remove pour spouts and cap all 1 liter bottles - [return bottles, caps and pour spouts to Funtastix](#)

Remove pumps from 1 gallon bottles and rinse syrup out of pumps - [return pumps to Funtastix](#)

*The Fun Starts Here!*
